FREE MOTION CONTROL CATALOG NOW AVAILABLE FROM GALIL MOTION CONTROL

MOUNTAIN VIEW, Calif., March 24, 2000 —Galil Motion Control, pioneer and leader of digital motion control technology, today announced the availability of their new 96 page, 2000 Motion Control Product Catalog which provides details on their three controller lines, the Optima, Econo, and Legacy Series. Free copies are available on-line at www.galilmc.com or by calling 1-800-377-6329.

The catalog includes detailed specifications for Galil's DMC-based controller models and provides a motion controller comparison table to help you locate and designate the functions required. Interface options include ISA, PCI, CompactPCI, PC/104, VME, RS232, USB and Ethernet. One through eight-axis versions are available with interchangeability of steppers and servo motors on any axis. Specifications are also included for Galil servo amplifiers and motors, as well as software tools.

A practical feature of the catalog is a 20-page technical reference guide, which includes an overview on motion control including elements of a servo system, tuning and programming. This segment details motion programming and discusses various modes of motion such as independent positioning, linear and circular interpolation, electronic gearing and electronic cam. The technical reference section includes pick-and-place, cut-to-length, rotating knife and web tension control application examples.

“Our new 2000 catalog offers design engineers another important resource in meeting any motion control challenge, said Lisa Wade, vice president of sales and marketing at Galil Motion Control. “For the first time, the catalog can be ordered through our newly re-tooled website, which gives us an additional opportunity to provide technical solutions to the motion control industry.”

Galil's Family of Products

Galil's product line includes the *Optima Series*, their highest performance multi-axis controllers for ISA, PSI, Compact PCI, PC/104, VME, RS232, USB and Ethernet interfaces. The *Econo Series* are designed for 1-axis applications and include ISA, PC/104, RS232 and Ethernet connectivity. Rounding out Galil's family of products are software design tools for quick and easy set-up, tuning and analysis, and servo amplifiers, motors and encoders.

About Galil

Founded in 1983, Galil Motion Control, Inc. was the first company to produce a microprocessor-based servo motion controller without tachometer feedback. Since the introduction of their first controller, they have continued to advance the technology and now have over 200,000 controllers installed worldwide and are known as the industry pioneer and leader. Following in this tradition, Galil recently was the first to market with a motion controller designed for the USB, and most recently with their Ethernet-based standalone controller. Galil is a privately held company and has been profitable for over 60 consecutive quarters. Today, you will see Galil controllers at work in such applications as machine tools, manufacturing, medical equipment, aerospace, materials handlings, packaging, semiconductor manufacturing and testing, food processing, textiles and a wide range of test and measurement equipment.
